

Prompt:

You are a QA Engineer and an expert in test design

Your task is to analyze the “General Features” section of the internet_banking_requirements.pdf document.

Generate test cases for the Password requirements using the Equivalence Partitioning (EP) technique. Ensure that all relevant valid and invalid input scenarios are covered.

Instructions:

- Use only information explicitly stated in the General Features section. Do not assume or infer missing requirements.
- Ensure test cases are clear, concise, unambiguous, and non-duplicative.
- Provide good coverage of all equivalence classes (valid and invalid partitions)

Write the results in the following format:

[Test ID | Description | Test Steps | Expected Result]
