Question 1:

Which TWO of the following can affect and be part of test planning?

- a) Budget limitations
- b) Test objectives
- c) Test log
- d) Failure rate
- e) Use cases

Advance Testing Concepts

Advanced Testing Concepts Practice

Answer 1:

- a) Correct - When you are planning the test and there are budget limitations, prioritizing is needed; what should be tested and what should be omitted
- b) Correct - See syllabus 5.2.1.
- c) Not correct - It is a part of test monitoring and control
- d) Not correct - It is a part of test monitoring and control
- e) Not correct - It is a part of test design

Question 2:

A video application has the following requirement:

The application shall allow playing on the following display sizes:

640x480

1280x720

1600x1200

1920x1080

Which of the following list of test cases is a result of applying the Equivalence Partitioning test technique to test this requirement?

- a) Verify that the application can play a video on a display of size 1920x1080 (1 test)
- b) Verify that the application can play a video on a display of size 640x480 and 1920x1080 (2 tests)
- c) Verify that the application can play a video on each of the display sizes in the requirement (4 tests)
- d) Verify that the application can play a video on any one of the display sizes in the requirement (1 test)

Advance Testing Concepts

Advanced Testing Concepts Practice

Answer 2:

The correct answer is c) Verify that the application can play a video on each of the display sizes in the requirement (4 tests).

This is a case where the requirement gives an enumeration of discrete values. Each enumeration value is an Equivalence Class by itself; therefore, each will be tested when using the Equivalent Partitioning test technique.

Question 3:

Which of the following situations is NOT suited for using exploratory testing?

- a) When there is time pressure, and/or the requirements are incomplete or inapplicable
- b) When the system is developed and tested incrementally
- c) When only new and inexperienced testers are available
- d) When the main part of the application can be tested only at the customer's site.

Advance Testing Concepts

Advanced Testing Concepts Practice

Answer 3:

- a) Not correct - Exploratory testing is most useful when there is little time pressure on testing.
- b) Not correct - Exploratory testing can be used here
- c) Correct - Exploratory tests should be performed by experienced testers with knowledge of similar applications and technologies.
- d) Not correct - Exploratory testing can be used at any location.

Question 4:

Which TWO of the following statements about static testing are MOST true?

- a) A cheap way to detect and remove defects
- b) It makes dynamic testing less challenging
- c) Early validation of user requirements
- d) It makes it possible to find run-time problems early in the lifecycle
- e) When testing safety-critical systems, static testing has less value because dynamic testing finds the defects better.

Advance Testing Concepts

Advanced Testing Concepts Practice

Answer 4:

- a) Correct - Defects found early are often much cheaper to remove than defects detected later in the lifecycle
- b) Not correct - Dynamic testing still has its challenging objectives
- c) Correct - Preventing defects in design or coding by uncovering omissions, inaccuracies, inconsistencies, ambiguities, and redundancies in requirements
- d) Not correct - This is dynamic testing
- e) Not correct - Static analysis is important for safety-critical computer systems

Question 5:

In what way can testing be part of Quality assurance?

- a) It ensures that requirements are detailed enough
- b) It reduces the level of risk to the quality of the system
- c) It ensures that standards in the organization are followed
- d) It measures the quality of software in terms of the number of executed test cases

Advance Testing Concepts

Advanced Testing Concepts Practice

Answer 5:

- a) Not correct - This is Quality assurance but not testing
- b) Correct - Testing contributes to the achievement of quality in a variety of ways
- c) Not correct - This is Quality assurance but not testing
- d) Not correct - The quality cannot be measured by counting the number of executed test cases without knowing the outcome
