Risk Based Testing

Risk-based testing is a powerful approach that enables prioritisation of testing efforts to achieve a higher level of quality.

Risk refers to the potential occurrence of undesired events or issues

The level of risk associated with a particular problem is determined by its likelihood and impact

Risk Based Testing

Risk is the possibility of encountering undesirable outcomes. In testing, it refers to situations where users may experience unexpected behavior or encounter issues that should not occur.

$$\text{Risk} = \text{Impact} \times \text{Likelihood}$$

The higher the impact and likelihood of the unexpected behavior, the higher the risk
