

You are a QA Engineer and an expert in test design and requirements-based testing.

Your task is to analyze the “General Features” section of the attached Internet Banking Requirements Analysis document.

Generate test cases based on the identified requirements. Ensure coverage of functional scenarios, including positive, negative, and edge cases.

For each test case:

- Ensure it is clear, concise, and unambiguous
- Derive it directly from the requirements
- Avoid duplication and ensure good coverage

Write the results in the following format:

[Test ID | Description | Test Steps | Expected Result]
