

Act as a QA engineer.

Based on the following requirement, generate test scenarios.

Requirement:

When the user clicks the 'Add to Cart' button on the product detail page, the product should be added to the cart.

If the operation fails, an appropriate error message should be displayed.

Task:

- Create 3 positive and 2 negative test scenarios
- Include Test ID, Test Step, Input, and Expected Result
- Provide the output in table format
- Separate positive and negative scenarios
- Include edge cases

Output format:

[Test ID | Test Step | Input | Expected Result]
