Basics of Software Testing

Bug Reporting

A bug is an issue related to software. If something on a website or application is not working as it should, it's referred to as a bug.

. There are several types of bugs that can occur in a software project

Visual bugs, Functional bugs, and Performance issues

Basics of Software Testing

Bug Reporting

Issues related to the appearance of the software, such as truncated images, misaligned pages, or incorrect button borders

They affect the user experience and should be addressed promptly.

Basics of Software Testing

Bug Reporting

Functional bugs:

- Related to the software's functionality
- It can be a major problem
- Should be fixed as soon as possible

Performance Issues:

- Critical aspect of software
- Mostly performed by software engineers / performance engineers.
- Test Engineers should detect major performance problems.

Basics of Software Testing

Bug Reporting

How to write a bug report ?

- The most commonly used reporting portal is Atlassian's "Jira"
- A bug report should be self-explanatory and as simple as possible
- It's essential to provide clear and concise information

Description
of the
problem

Steps to
reproduce

Screenshots
or error
messages
